

INCIDENT RESPONSE REPORT

Ransomware Infection (LockBit) — Workstation Forensic Memory Analysis

Prepared by	Aaron Barrichello Pattinama
Role	SOC Analyst Candidate
Date of Report	14 – August - 2026
Incident Date	13 April 2023
Affected Asset	JOSH-PC (192.168.235.141)
Affected User	Josh (local admin)
Ransomware Family	LockBit
Classification	Confidential — Internal Use Only

1. Executive Summary

Pada 13 April 2023, workstation milik username "Josh" (hostname JOSH-PC, IP 192.168.235.141) terinfeksi ransomware keluarga LockBit. Analisis forensik memori mengonfirmasi eksekusi file berbahaya mal.exe dari direktori Desktop pengguna pada pukul 10:06:45 UTC, yang segera memasang mekanisme persistence melalui Registry Run key, mengenkripsi sedikitnya 1.488 file dengan ekstensi .lockbit, serta melakukan upaya penyebaran lateral (lateral movement) ke lebih dari 200 host lain dalam subnet yang sama melalui port TCP 135 dan 445.

Malware juga terbukti menjalankan rangkaian perintah anti-recovery (penghapusan Volume Shadow Copy dan katalog backup Windows) untuk menghambat proses pemulihan. Snapshot memori diambil saat proses enkripsi masih berlangsung, sekitar 23 detik setelah eksekusi awal, sehingga ransom note belum sempat ditulis ke disk meski identitasnya (Restore-My-Files.txt) telah dikonfirmasi melalui analisis sandbox eksternal terhadap sampel yang identik.

2. Forensic Tools & System Triage

2.1 Forensic Tooling & Methodology

Tools yang digunakan dalam analisis ini:

- Volatility 3 (v2.28.0) — analisis memory forensik dari file evidence.vmem
- VirusTotal — hash lookup, analisis statis, dan analisis dinamis/sandbox untuk identifikasi malware family
- PowerShell (Get-FileHash) — perhitungan hash SHA-256 dari file yang diekstrak

Metodologi / urutan langkah analisis:

- windows.info — identifikasi profil sistem operasi dan waktu snapshot memori
- windows.sessions, windows.getsids, windows.cmdline — identifikasi user context dan proses yang berjalan atas nama masing-masing user
- windows.pslist, windows.pstree, windows.psscan — triase proses untuk menemukan proses mencurigakan berdasarkan nama, path eksekusi, dan hubungan parent-child
- windows.dumpfiles --pid <PID> — ekstraksi executable proses mencurigakan dari memori, dilanjutkan dengan perhitungan hash SHA-256 dan pencarian di VirusTotal
- windows.registry.printkey --key "...CurrentVersion\Run" — pemeriksaan mekanisme persistence pada registry
- windows.filescan — pemindaian seluruh referensi file di memori untuk menemukan artefak dampak ransomware (file terenkripsi, ransom note)
- windows.netscan — pemeriksaan koneksi jaringan aktif untuk mendeteksi indikasi C2 atau lateral movement

2.2 System Profiling — User Context

Hostname	JOSH-PC
IP Address	192.168.235.141
OS Version / Build	Windows 7 SP1 x64 (Build 7601.26111)
Affected Username	Josh (local admin — member of Administrators)
Domain / Workgroup	WORKGROUP
CPU Count	2
Memory Snapshot Time	2023-04-13 10:07:08 UTC

Windows 7 SP1 telah mencapai End-of-Life dan tidak lagi menerima security update dari Microsoft ini merupakan faktor risiko signifikan yang perlu ditindaklanjuti.

3.2 Malware Integrity — File Hash

File Name	mal.exe (nama asli di riwayat VT: hehehehhe.exe)
SHA-256	5988e75518b2f365671dc49da18b5a70274351721f1f3a8f87bf32984e4024c
MD5	abb148afdb78e76007d59ed015e6bade
File Size	151.50 KB (155,136 bytes)
Compile Timestamp	2020-04-29 05:58:36 UTC

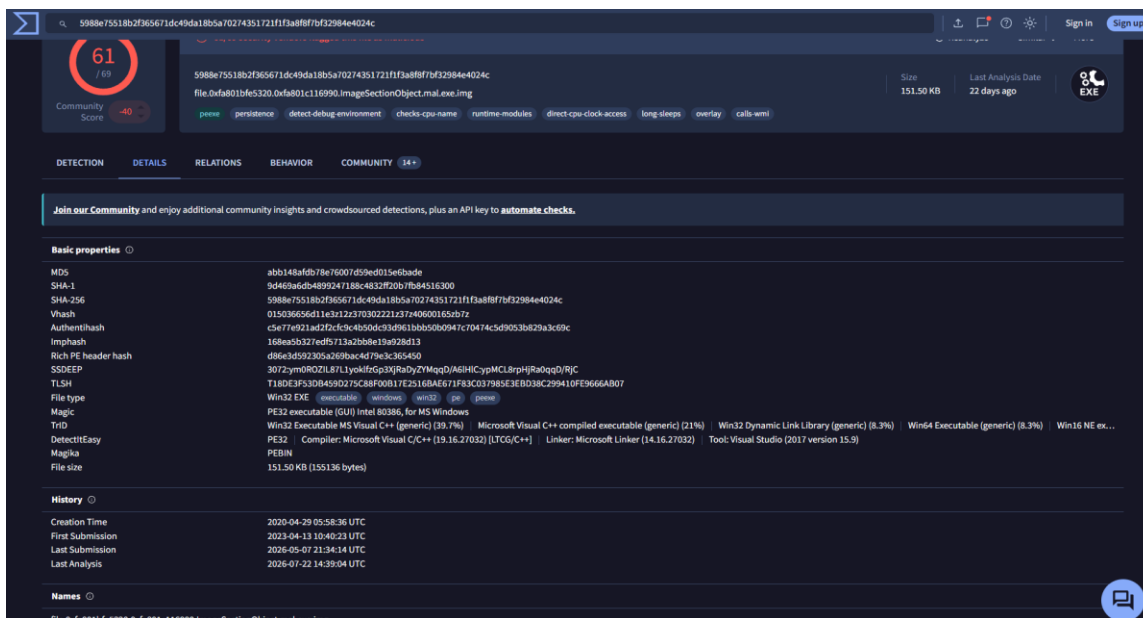

File yang sama dikonfirmasi identik lewat dua region memori berbeda saat proses dumpfiles (ImageSectionObject SHA-256: 5988e755... dan DataSectionObject SHA-256: cea3e8a3...) keduanya dikonfirmasi LockBit oleh puluhan vendor antivirus dengan tingkat kepercayaan 100/100.

```

```

3.3 Network Indicators — Lateral Movement

Analisis windows.netscan menemukan pola koneksi yang sangat signifikan: ratusan koneksi TCP dengan status SYN_SENT dari host 192.168.235.141 ke lebih dari 200 alamat IP berbeda dalam subnet /24 yang sama, menargetkan:

- Port TCP 135 (RPC/DCOM) — mayoritas percobaan koneksi
- Port TCP 445 (SMB) — beberapa percobaan, status CLOSED (host tujuan menolak koneksi)

Pola ini konsisten dengan tag perilaku "SPREADER" yang diberikan oleh sandbox VirusTotal, mengindikasikan LockBit mencoba menyebar secara lateral ke mesin lain di jaringan menggunakan protokol SMB/RPC administratif. Tidak ditemukan bukti koneksi C2 eksternal (internet) yang berhasil — seluruh traffic mencurigakan mengarah ke jaringan lokal.

4. Persistence, Impact & Timeline Analysis

4.1 Persistence Mechanism

Registry Key Path (exact)	??\C:\Users\Josh\ntuser.dat\Software\Microsoft\Windows\CurrentVersion\Run
Value Name	XOIXADp001
Value Data	"C:\Users\Josh\Desktop\mal.exe"
Last Write Time	2023-04-13 10:06:45.000000 UTC

Timestamp modifikasi registry ini identik dengan waktu proses mal.exe pertama kali muncul di process list mengonfirmasi bahwa mekanisme persistence dipasang serentak dengan eksekusi awal malware.

vol -f memdump\memdump.vmem windows.registry.printkey --key "Software\Microsoft\Windows\CurrentVersion\Run"									
Volatility 3 Framework 2.28.0									
WARNING: volatility3.framework.layers.vmware: No metadata file found alongside VMEM file. A VMSS or VMSN file may be required to correctly process a VMEM file. These should be placed in the same directory with the same file name, e.g. memdump.vmem and memdump.vvss.

```

4.3 Incident Timeline

Kronologi kejadian disusun berdasarkan timestamp yang ditemukan di memory dump:

- 10:00:51–10:02:56 UTC — Proses booting normal sistem Windows (smss, csrss, services, dll)
- 10:06:45 UTC — Proses mal.exe (PID 900) dieksekusi dari C:\Users\Josh\Desktop\; registry Run key XO1XADpO01 dipasang pada detik yang sama (persistence)
- 10:06:45–10:07:08 UTC (±23 detik) — Proses enkripsi file berlangsung aktif; sedikitnya 1.488 file diberi ekstensi .lockbit; ratasan percobaan koneksi lateral movement ke subnet lokal via port 135/445
- 10:07:08 UTC — Snapshot memori diambil; ransom note Restore-My-Files.txt belum sempat ditulis ke disk pada titik ini, mengindikasikan proses enkripsi masih berlangsung aktif saat mesin diisolasi/snapshot diambil

Perintah anti-recovery (vssadmin delete shadows, wmic shadowcopy delete, bcdedit /set recoveryenabled no, wbadmin delete catalog) turut dikonfirmasi lewat analisis sandbox pada sampel identic mengindikasikan Shadow Copy dan katalog backup Windows lokal kemungkinan besar telah dihapus oleh malware sebelum/selama insiden berlangsung.

5. Incident Response Strategy

5.1 Containment

- Putuskan mesin JOSH-PC (192.168.235.141) dari jaringan segera cabut kabel LAN/nonaktifkan adapter WiFi, atau isolasi via VLAN quarantine khusus. Ini prioritas utama mengingat bukti netscan menunjukkan proses aktif mencoba menyebar ke 200+ host lain di subnet yang sama.
- Jangan matikan mesin biarkan tetap menyala (hanya diputus jaringannya) untuk menjaga integritas bukti forensik bila diperlukan analisis lanjutan.
- Blokir IOC di firewall/gateway: hash SHA-256 (5988e755...), domain lockbit-decryptor.com, dan pola koneksi mencurigakan ke port 445/135 antar-host non-server.
- Nonaktifkan akun Josh sementara di Active Directory/local admin untuk mencegah penggunaan kredensial yang sama di mesin lain.
- Scan mesin-mesin lain di subnet 192.168.235.0/24 yang sempat menjadi target percobaan koneksi (SYN_SENT) walau status mayoritas gagal/closed, perlu verifikasi tidak ada mesin lain yang turut terinfeksi.
- Amankan salinan forensik lengkap (disk image, bukan hanya memory dump) sebelum melakukan tindakan lebih lanjut, untuk kebutuhan investigasi dan keperluan legal.

5.2 Eradication

- Hapus file malware: C:\Users\Josh\Desktop\mal.exe (SHA-256: 5988e755...).
- Hapus registry persistence key: HKCU\Software\Microsoft\Windows\CurrentVersion\Run, value XO1XADpO01.
- Jalankan full scan dengan endpoint protection/EDR yang sudah diperbarui signature LockBit terbaru untuk memastikan tidak ada komponen tersisa (dropper lain, scheduled task, dll).
- Periksa Scheduled Tasks secara manual LockBit dikenal juga memanfaatkan Task Scheduler sebagai mekanisme persistence tambahan yang belum terverifikasi dalam analisis ini.
- Reset seluruh kredensial yang berpotensi tersimpan/digunakan di mesin ini (local admin, cached domain credentials), mengingat proses berjalan dengan privilege administrator.
- Pertimbangkan wipe & reimage total mesin daripada cleaning manual untuk ransomware modern seperti LockBit, reimage jauh lebih aman dibanding mengandalkan removal tool karena risiko residual backdoor.

5.3 Recovery & Hardening

- Pulihkan data dari backup offline/immutable. PENTING: LockBit pada kasus ini terbukti menjalankan vssadmin delete shadows /all, wmic shadowcopy delete, dan wbadmin delete catalog Shadow Copy dan Windows Backup lokal kemungkinan besar sudah terhapus. Jangan andalkan System Restore; gunakan backup eksternal/cloud yang terpisah dari jaringan yang terinfeksi.
- Verifikasi integritas backup sebelum restore pastikan backup yang dipakai diambil sebelum tanggal insiden (13 April 2023) dan bebas dari malware.
- Reimage mesin JOSH-PC dari base image bersih, bukan sekadar recovery di tempat.
- Patch & update: OS Windows 7 SP1 sudah end-of-life dan sangat rentan migrasikan ke versi yang masih didukung, atau minimal terapkan seluruh patch keamanan yang tersedia bila migrasi belum memungkinkan.
- Harden SMB/RPC: nonaktifkan SMBv1, batasi port 135/445 hanya untuk komunikasi yang benar-benar diperlukan (segmentasi jaringan/firewall internal) ini jalur utama yang dieksploitasi untuk lateral movement pada insiden ini.
- Terapkan application whitelisting (mis. AppLocker/WDAC) untuk mencegah eksekusi executable dari folder Desktop/Downloads/Temp, mengingat mal.exe dijalankan langsung dari Desktop user.

- Terapkan prinsip least privilege cabut hak local administrator dari akun Josh jika tidak esensial untuk pekerjaannya; proses malware berjalan dengan privilege admin yang memperbesar dampak, termasuk kemampuan menghapus shadow copy.

5.4 Post-Incident Recommendation

- Terapkan strategi backup 3-2-1 dengan salinan offline/air-gapped atau immutable (mis. cloud backup dengan object lock) agar ransomware yang menghapus shadow copy lokal tidak dapat menyentuh backup tersebut.
- Terapkan segmentasi jaringan (network segmentation) untuk membatasi broadcast domain, sehingga satu mesin terinfeksi tidak dapat langsung menjangkau ratusan host lain seperti yang terjadi pada insiden ini.
- Tingkatkan security awareness training bagi pengguna titik masuk awal (mal.exe di Desktop) mengindikasikan kemungkinan unduhan/eksekusi manual, sehingga edukasi terkait phishing dan verifikasi file sebelum eksekusi perlu ditingkatkan.
- Deploy EDR/XDR dengan kemampuan behavioral detection (bukan hanya signature-based AV) — pola LockBit di sini mencakup penghapusan shadow copy dan modifikasi bcdedit yang dapat dideteksi lewat behavior rule (mis. Sigma rule "Delete shadow copy via WMIC", "CurrentVersion Autorun Keys Modification" yang sudah match di VirusTotal).
- Perbarui playbook Incident Response khusus ransomware, mencakup prosedur isolasi cepat berbasis network segmentation otomatis (mis. NAC yang dapat auto-isolate host begitu mendeteksi mass-scanning ke port 135/445).
- Audit dan nonaktifkan protokol legacy (SMBv1, RPC unrestricted) di seluruh jaringan sebagai kebijakan baseline, bukan hanya di mesin yang terdampak.
- Perpanjang retensi log jaringan (NetFlow/firewall) untuk mendukung investigasi forensik retroaktif pada kasus ini, konfirmasi apakah mesin lain benar-benar berhasil dieksploitasi memerlukan log jaringan yang lebih luas dari sekadar memory dump satu mesin.

6. Indicators of Compromise (IOC) Summary

Type	Value
Malware Filename	mal.exe
Malware SHA-256	5988e75518b2f365671dc49da18b5a70274351721f1f3a8f8f7bf32984e4024c
Malware MD5	abb148afdb78e76007d59ed015e6bade
Ransomware Family	LockBit
Encrypted File Extension	.lockbit
Ransom Note Filename	Restore-My-Files.txt
Persistence Registry Key	HKCU\Software\Microsoft\Windows\CurrentVersion\Run\XO1XADpO01
Lateral Movement Ports	TCP 135 (RPC), TCP 445 (SMB)
Related Domain (dari sandbox)	lockbit-decryptor.com
Affected Host	JOSH-PC (192.168.235.141)
